

Measuring User Outcomes in Research Software

Meag Doherty
2022 International SSI Fellow
t: @EmDohh

Definitions

Measure	estimate or assess the extent, quality, value, or effect of (something).
User	a person who uses or operates something, especially a computer or other machine.
Outcomes	the way a thing turns out; a consequence.
Research Software	A computer-based application that converts inputs into outputs to support the user in one or more research task

My Goal

Raise awareness of and appreciation for user needs in the research software engineering process

Calls to Action

- ✓ Share how you measure success in your research software
- ✓ Share events and spaces where people might care about this

.. In return, I can speak to you about user experience design, product analytics, and software leadership.
